Overview

HR Business Cloud(HRBC) Version 4.0.0 has the following changes.

- 1 A new top page with direct access to everyday operations has been introduced
 The frequently used functions have been summarized on the top page.
- The UI of the login screen has changed

 The UI of thelogin screen has been simplified and made much easier to understand.
- Data that has been updated within the year is displayed on the list view screen.

 A new feature to filter out and display data that has been updated within the year has been added.
- 4 Progress NAVI to visually monitor progress
 For details, please check the release note on Progress NAVI.

Issues

- Fixed the issue of <code>「End Flag」</code> and <code>「End Reason」</code> not being reflected in the email templates if the <code>「End Flag」</code> and <code>「End Reason」</code> are changed to any format other than check box.
- Fixed the issue of not being able to correct ALIAS on option master if when specifiying ALIAS, an existing one is input and an error occurs when trying to save.
- Fixed the issue of not being able to send bulk emails due to SMTP server error when the recepient's address is input then a blank is selected from the drop down menu of receivers field.

Details

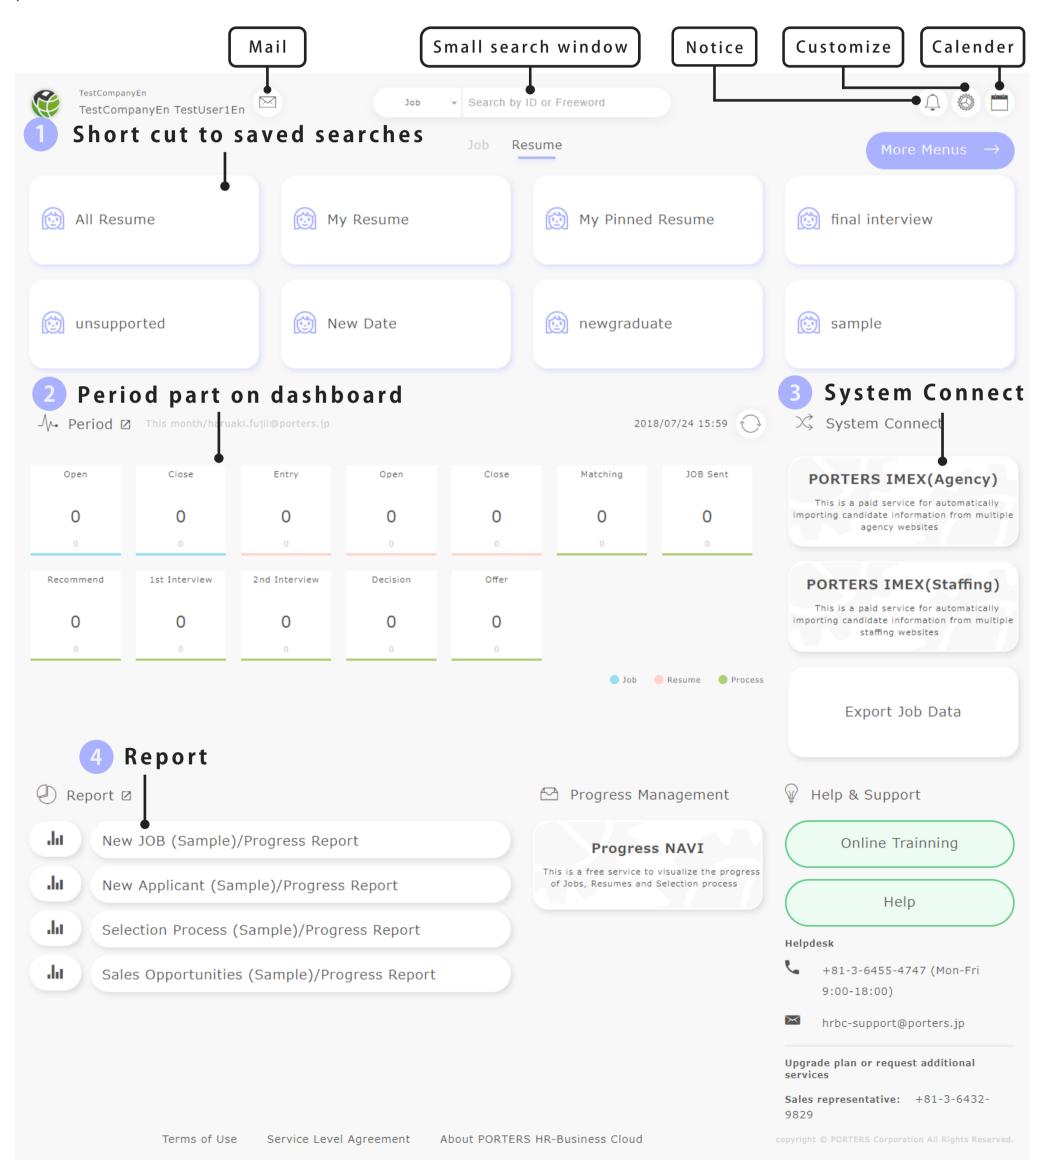

A top page with direct access to everyday operations

Summary

With the concept of 'consolidating the frequently used functions', users opeartion has been optimized with these frequently used functions on the HRBC top page.

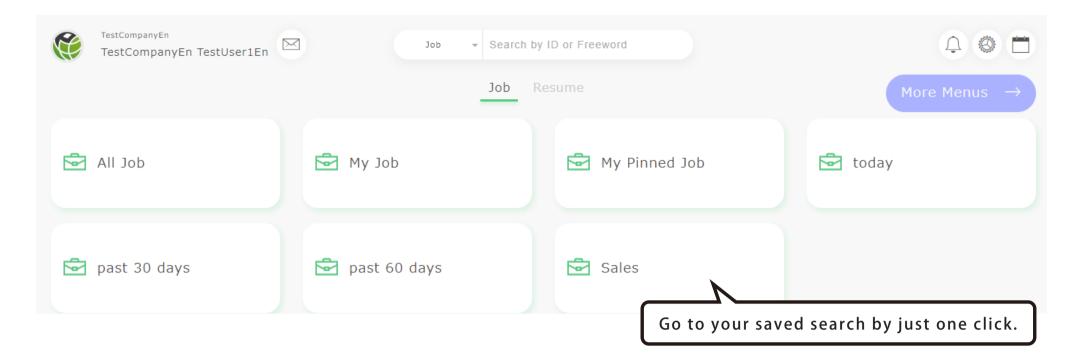

By having the frequently used function on the top page, the time spent on moving to the fucntions is shortened and hence increase work efficiency.

Also, the top page can be used intuitively by all, from the new recruits to the directors regardless of their position.

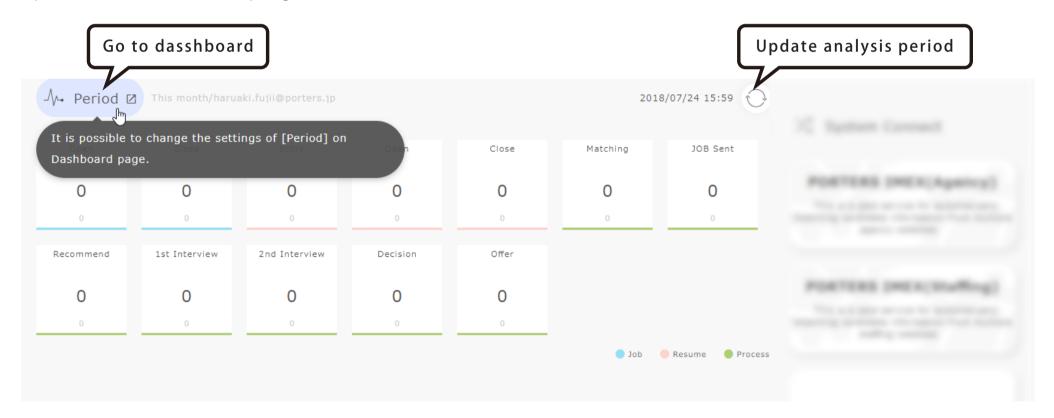

Short cut to saved searches

From the top page, you can quickly display the search results by clicking on the saved search button.

Period part on dashboard

The contents of the dashboard can quickly be confirmed. By clicking \[\text{Set Period} \] on the top left side of the page, you can access the dashboard page and set the analysis period. To update the contents, click the update button on the top right side.

3 System Connect

Login to PORTERS IMEX, Upload of Jobs to media can now be done on the top page.

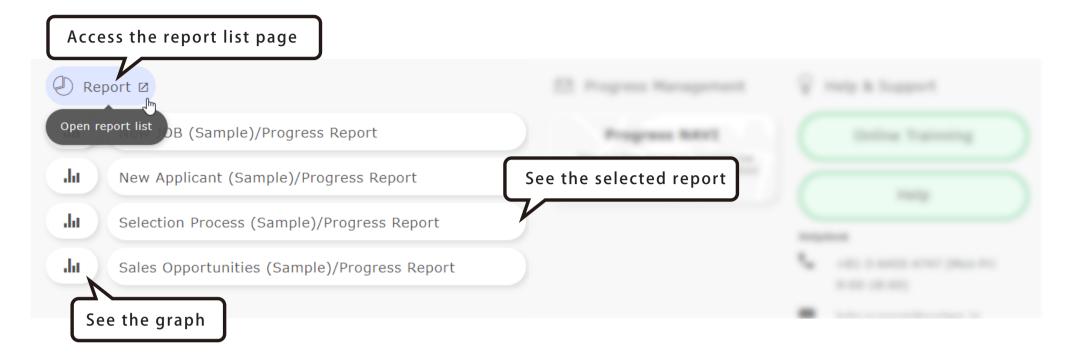

4 Report

The list of the recently accessed reports can be checked.

You can access the report list page by clicking "Report" in the upper left.

In addition, by clicking each report name you can check the detailed data and by clicking on the graph icon the graph of the selected report is displayed.

Other new functions · Improvements

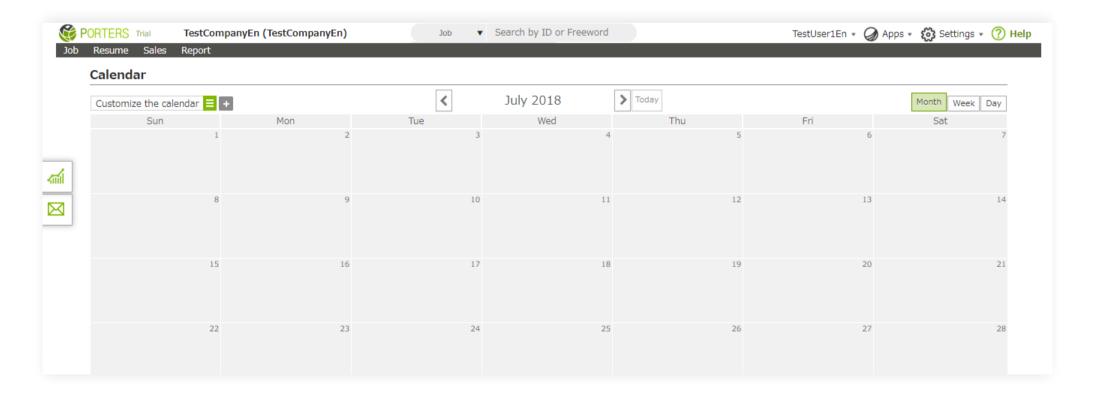

More Menus

This is to access the calendar on the current top page. Menus not displayed on the top page can be accessed here.

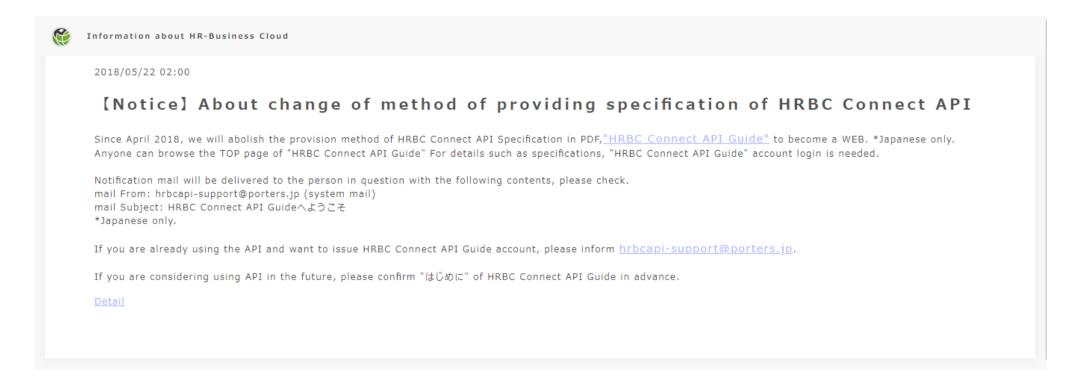

Calender

This is to access the calender page.

Notice

Click the notification icon to display the list of notifications.

Progress NAVI

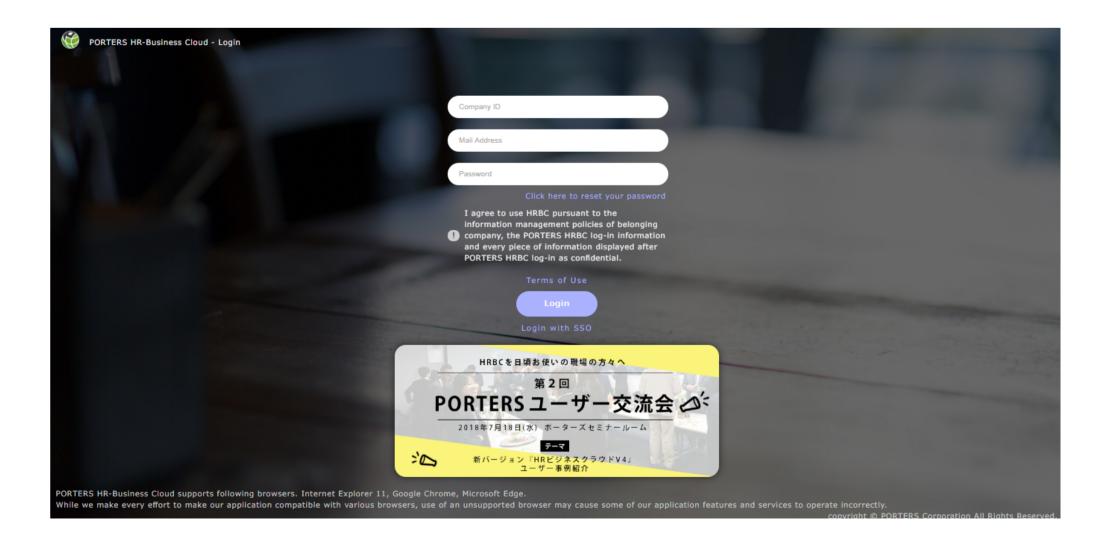

The progress NAVI page can be accessed from here. For further details, please check the release note on Progress NAVI.

2 Login screen UI

Summary

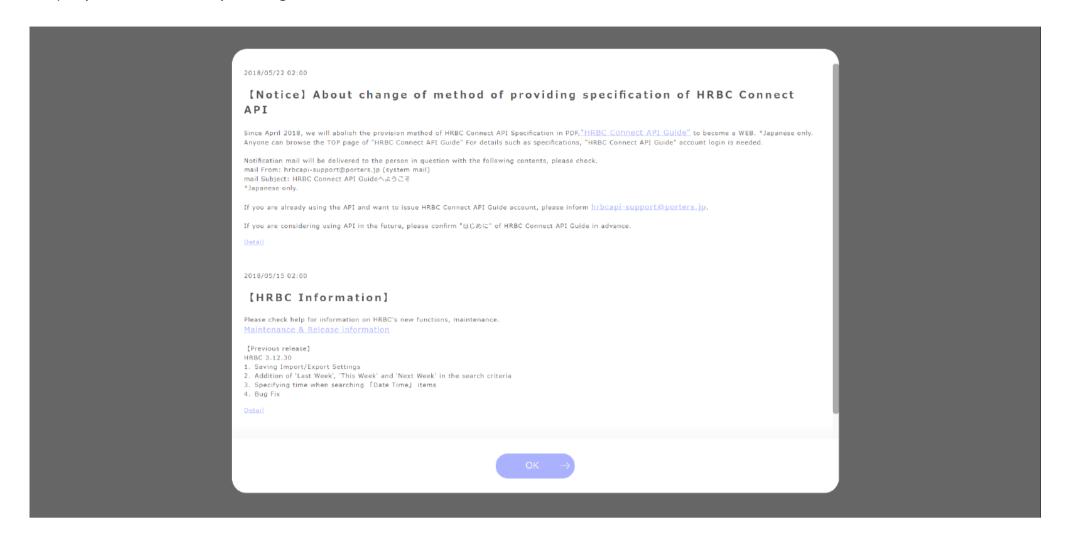

Compared to the previous login screen, HRBC V4 login screen is simpler with an easy to understand UI. A link to the service agreement page has been added too.

Also, it is necessary to agree to the service agreement at the first login.

The latest notifications will be displayed in popup after login.

From the second login, the same notifications will not be displayed. Only the latest notifications are displayed whenever you login.

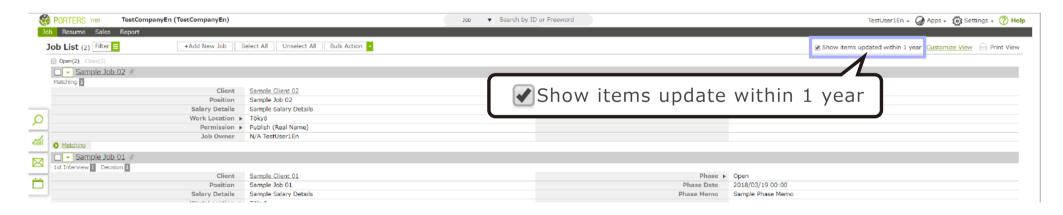

3 Filter and display data that has been updated within the year.

Summary

A filter condition is set to display only data that has been updated within one year. This narrows down the search range and contributes to performance.

Displays data updated within one year
